AMERICAN UNION

Vol. 60 No. 6. DENTON, MARYLAND, THURSDAY, SEPTEMBER 23, 1915. $1 00 Per Year

Don't stick to the careless, old-fashioned method of carrying your bank roll. A frightful amount of money has been lost and stolen in this way.

Better Be Safe Than Sorry.

Open a Check Account here, and your funds will be absolutely safe, yet conveniently accessible, and you will have the advantage of an indisputable record without expending practically any effort.

The Peoples National Bank,
DENTON, MD.
ALBERT G. TOWERS, Prest. T. F. JOHNSON, Cashier.

NATURE IS JEALOUS.

She won't permit abuse. If you abuse your Eyesight by overwork, without the help of Glasses, you'll come to a time when your Eyes are past human aid. You cannot be too cautious about this. Let me have a look at your Eyes. Perhaps a simple pair of Resting Glasses will serve you now and preserve your Eyes from strain and trouble.

Hours by appointment only.

PRICE OF OLD CAR

To Get Fair Values New Car Purchaser Must Consider Several Factors.

LESS THAN ONE-HALF VALUE

Average Purchaser Doesn't Know All Conditions Entering Into Disposal of Used Machine by Dealer and Should Make Liberal Allowances for Them.

The new car purchaser, who would obtain a fair price for his old car as partial payment, must consider several factors that enter into the transaction.

His old car, no matter how short a time it may have been cared for, is nevertheless a second-hand machine, and therefore possesses an actual market value probably scarcely more than half that credited to it by its owner. When taken in exchange, it probably will need overhauling to a greater or less extent, and possibly painting and varnishing. It will occupy space in the dealer's showroom or repair shop during the time that it remains unsold, and this can be represented in actual dollars and cents costs for rent; "carrying" second-hand cars constitutes no small portion of the cost of doing business on the part of the dealer who takes many such vehicles in exchange. In addition to these costs, the dealer has a cold cash investment equal to the amount allowed for the second-hand car. He must pay interest on this, and the transaction is the same as though he had loaned this sum to the purchaser of the new car and had taken the second-hand machine as security. Furthermore, it is only fair that the dealer should expect a small profit on the resale of the used car that will not only cover the actual expense of overhauling, but that will represent the legitimate profit of doing business.

The average purchaser cannot, of course, know of all the conditions affecting the disposal of his used car by a certain dealer. He should not, however, allow the difference of $50, $100 or even $500, that might be offered on the exchange of the new car, to stand in the way of the selection of the machine which he has decided will be best suited to his requirements. It may generally be assumed that a reliable dealer handling a reliable car will offer a fair price for a used car in exchange for a new one.—H. W. Slauson in Leslie's.

The Spark and the Starter.

It is just as important to retard the spark when using a starter as when hand cranking an engine.

NEW AUTO RECORD SET

COAST TO COAST RUN MADE IN TWENTY-FOUR DAYS.

Mrs. Lillian Harris Has Moved Up the Mark for Woman Long Distance Drivers.

In making the coast-to-coast drive—New York to Los Angeles—in 24 days, Mrs. Lillian Harris of Redbank, N. J., is considered to have set a new record for woman drivers.

Carrying four other women as passengers, Mrs. Harris drove the entire distance of 4,950 miles without assistance. She reached her destination without mechanical or any other kind of difficulty. One of the things about which Mrs. Harris was particularly enthusiastic was the absence of fatigue during the tour, which she attributes to the smooth running of the car and the ease with which it was handled.

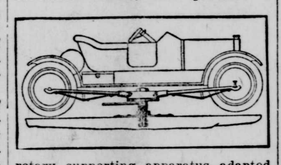
Out of the twenty-four days there were only four on which it was necessary to go into gears lower than high, the use of the intermediate and low gears being occasioned by encountering some unusually bad roads.

After the women have visited the San Diego exposition, toured southern California and have seen the San Francisco fair, they will begin the return trip overland, following the Lincoln highway.

ROTARY LIFTING AUTO JACK

Lifts Vehicle in One Operation and Provides for Swinging It Around on Own Axis.

This automobile jack, invented by a New York man, provides means for lifting a vehicle of the character indicated in one operation; provides means for rotating the vehicle about a self-contained center; and provides a



rotary supporting apparatus adapted for removal from its service position. The engraving herewith gives a side view of the jack, and showing in conjunction therewith an automobile, the same being supported in lifted position thereon.

Makes Poor Lubricant.

Frequent additions to the oil in the crank case are all right for a limited time only. When the oil gets saturated with mineral wear, and has also considerable gasoline which dips past the piston rings combined with it, it is a very poor lubricant.

The production of gold in Australia has declined steadily since 1893, the output last year being 156,160 ounces less than the year before.

An Austrian scientist has invented a method of sterilizing against insect, germ and fungous life the ground into which posts are to be set.

The United States produced 29 of the 66 epoch-making inventions, England 17, France 10, Germany 5, Italy 2, Brazil, Austria and Sweden 1 each.

ARE YOU WISE THAT—

An oyster gets four months vacation every year.

Nothing smaller than a flush is ever held by a participant in a stage poker game.

Ninety-six per cent of New York families have potato salad for Sunday night supper.

A Xenia (O.) man has patented a device to open the rear buttonhole of laundered shirts.

The amount of sirup served with hot cakes in the ten-cent restaurants is usually sufficient for one cake.

Persons living within 93 miles of a large city always register from said city when they come to New York.

A third base coach in a league ball game once remained inside the coaching box for almost an entire inning.

Many otherwise broad-minded men persist in believing that their game of solitaire is the best one ever invented.

Night and Early Morning Calls

REMEMBER that telephone call that came for you the other night after you had retired? You had to leave your bed and hike down the hall or downstairs to answer it. Do you remember that early morning call you wanted to make but hated to get up and do it?

An extension station on a little table beside your bed would have solved the difficulty. This is another telephone, connected with your regular telephone, and located in any part of the house you wish.

It costs less than two cents a day. Ask our Business Office for full information.

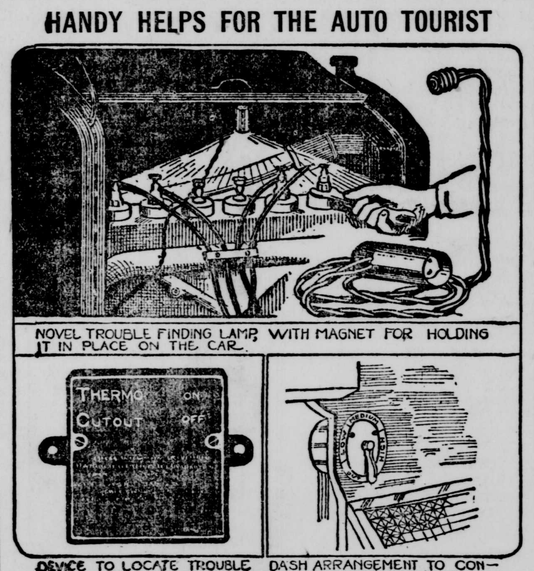
HANDY HELPS FOR THE AUTO TOURIST



NOVEL TROUBLE FINDING LAMP, WITH MAGNET FOR HOLDING IT IN PLACE ON THE CAR.

DEVICE TO LOCATE TROUBLE IN ELECTRIC CIRCUITS. ON AUTOMOBILES.

DASH ARRANGEMENT TO CONTROL INTENSITY OF LIGHT FROM HEADLIGHTS.

An Indianapolis concern has brought out what is termed a thermo cutout, which is attached to the dash of the car and which is designed to indicate whether a circuit is complete or whether there is a leak or short. Crossed wires or a ground will cause the cutout to turn off all circuits. Difficulty on any circuit may be found by resetting the cutout so that when the switch is turned to the various circuits the faulty one will operate the cutout.

With the proper use of electric headlights there should be no objection on the part of pedestrians, and there need be no glaring headlights, for several devices have been brought out to use smaller lights when desired. The use of electric lights permits the operator to turn the lights on or off at will, and so while using the side lights to conform to the law's requirements it is only necessary to switch on the headlights for an instant if a particularly dark piece of roadway is encountered and turn them off at once their work is done.

In the use of the headlights an improvement has come whereby a switch is located on the dash and the lever may be operated by the foot. This is designed to regulate the intensity of the light and may be set at low, medium, high, or out, thus permitting the operator to regulate the lights according to road conditions or the necessity for having more or less light.

Those who have electric lights have no excuse for using glaring headlights in the city except occasionally when a light circuit is out of commission, which is seldom and usually only for a few hours after a severe storm. The streets and boulevards are generally speaking so well lighted as to require only the side lights, and their use alone would go a long way toward the ultimate end of the "safety first" crusade.

Another handy little device which can be used in connection with the electric system is what is called a stickalite lamp, which has a magnet attachment to secure the lamp to any steel part of the car while adjustments are being made or a tire is being changed. This operates from an ordinary six volt storage battery such as is used for ignition purposes. It is only one inch in diameter, has a reflector tube which acts as a protector to the bulb, and weighs but three ounces.—Chicago Tribune.

The Sanders & Stayman Co.

OF BALTIMORE

Semi-Annual Piano Sale

MUSIC LOVERS will find the following collection of brand-new slightly used and rebuilt pianos, just the kind of instrument wanted for both city and country homes, to start the musical education of the children—at prices they can afford to pay and on unusually liberal terms.

The semi-annual sale of this half-century-old music house is always an event of importance. The values are exceptional. Every one of these instruments bears our guarantee of its quality.
