The Spreader Comes First

Nothing in America is more important than the success of the 1918 crop. Of all the means at the farmers' command for increasing the crop, a good manure spreader easily comes first. It requires no addition of power or help, in fact it saves time and labor. **It increases the yield from every acre in which it is properly used.** This is the year, and this is the month to buy and begin to use a

Low Cloverleaf Manure Spreader

The Low Cloverleaf is a wide spreading, easy running, light draft, narrow box spreader, made in three handy sizes—small, medium and large. The wide spreading device catches the manure as it comes from the beater, breaks it up into still finer particles, and throws it out beyond the wheel tracks in a wide, even spread. This is the kind of fertilizing recommended by all the authorities.

The entire load is spread in 3 to 5 minutes. The machine runs easily and lasts a long time because the working parts are all securely fastened to a sturdy steel frame which keeps them all in place and in line.

The Low Cloverleaf spreader is backed by International Harvester reputation for quality machines. It does the work as it should be done. This year of all years you should have a good spreader and you will profit most by using a Low Cloverleaf. Immediate delivery. Place your order now.

SUGAR RATIONS REDUCED

Beginning next Thursday, August 1, two pounds of sugar per month per person will be the maximum allowance under an order issued by the Food Administration Thursday. The present maximum is three pounds, and when that order was issued it was assumed that it would be only temporary, until the annual increase due to the Cuban crop would become available. Instead of that, however, the Food Administration now discovers that the supply of sugar in sight is steadily decreasing, so that reduction of the monthly allowance has become unavoidable.
