Bone as a Fertilizer Preparation For thirty years bones have been treat-ed with acids, to reduce them to a solua-cash girls at Macy's wear gowns of brown ble condition, or to break them down into holland down to their feet, with their a fine powder. When thus treated the residue is known as superphosphate of lime. But we now speak of them in their natural condition, and refer to methods of preparing them for use. Every farmer in the country can save a considerable quantity of bones of home production, old looking. There is a system of checks and by a little trouble and attention can both here and at Stewart's which is a percollect a large quantity from the dwellers fect nuisance to purchasers. Every artiof villages in his vicinity. We once gave cle that one buys must be sent to the notice to the boys in a village of 5,000 desk to be wrapped up. The saleslady inhabitants, that we would pay 12½ cents makes out three papers in her own book, a bushel for all the bones brought to a also three papers for the cash-girl. These certain vacant lot; as the result more than 60 bushels were found and were brought in wheelbarrows and baskets. The boys worked together, struck a "find" in an out of the way place, and from that and other places accumulated 24 bushels, and other places accumulated 24 bushels, and of the store, so that one must wait half were very rich with their \$3 received for an hour for a ten cent parcel. I can unthem. In this way one can often secure derstand how this may be necessary in at least as much bone as will return to his the sale of expensive goods, but when it land a large portion, if not the whole, of comes to notions, proprietors should have the animal waste of phosphates. To overcome the difficulty of making use of them in a raw and unbroken state, the I bought five cents worth of darning

In grinding bones in powerful mills the ton. When the bone is "raw," that archal bishop. is in its natural and fresh condition, it contains all its nitrogen, but when steamed to extract glue, the nitrogen in great part is removed, and the bone is less valuable. On account of the difference article in the market, it is always preferable to procure the ground bone made by will grow around and feed upon them for square mile in the world." many years or until they are entirely used up. They can be broken with -a peck to a half bushel scattered about in the soil where they will be reached by
