Of Every Description.

Hats, Caps and Gents' Furnishing Goods

TO BE SOLD AT A SACRIFICE FOR THE NEXT 30 DAYS AT

**A. FRIEDMAN'S, Chestertown, Md.**

The bean is one of the most ancient articles of human food. It was cultivated in Egypt from the earliest ages, and formed the common dish known as "Kibbeh." The bean is also known as "Kibbeh," which was bartered away his birthright. It is supposed to be a native of Persia. DeCaen's date believed it had come originally from the island of Cyprus. Some say the Greeks used it for food, but the Romans gave great attention to its cultivation, and have some curious superstitions notions of it. The bean is a good article of food, and the beans have been introduced into Europe, and the beans have been introduced into England; but while this is all very interesting, it must not be forgotten that, after all, it is our own bean, but still the bean is a good article of food. We have written history further than what is found in the botanical dictionaries, as to the bare fact of the natural habitat of the bean. The bean is a native of the East Indies, the common pale kidney bean is from India; the scarlet flower varieties are from Mexico, Central America, and West Indies, while some other varieties are from tropical South America. Of the chemical and nutritional qualities of our bean enough is known to give us a clear idea of its value in the economy. We know that they contain a large portion of nitrogenous substance and are very rich in albumin and vegetable protein. They are also rich in the milk, and may be made into cheese equally good as skim milk. But the dictum of the apothecary may be taken as an indication of the bean's value as an article of diet. Judged by this kind of evidence, as seen in the range of those hardy men who spend the most rigorous efforts to the point of exhaustion in the Northern deserts or upon the mountains, or in the oases of those who plow the "raging main," we may consider that the bean is a good article of food. The bean is a bean by the chemist is equally deserved by our own species, while in flavor our infinity surpasses them. —New York Times.

WOOL and MUTTON.—Some of our exchanges, says the Journal of Agriculture, hold that too much importance is attached to the production of wool and too little to mutton. In the years gone by, when we were more dependent on our own backs, now it comes from under their hoods. We think the thoughtful sheepmen will endeavor to hold on to their sheep, and to turn them into sheep and lambing both to their full capacity, he will not find sheep raising an unprofitable calling. The attention of the public to the raising of sheep and lambs in securing better facilities for transportation by double-decker cars, that mutton is becoming the primary factor in sheep growing. Mutton is a good article of food, and the production as well as in wool growing, hence they will retain the Merino, raise large flocks, and depend on mutton mainly, but we can always hope they can do it by the aid of reasonable rates of transportation, some return for their mutton. A mixed sheep, one that will also produce mutton, can be raised after a short time, with a carcass going up to 125 or 150 pounds, will be the best sheep for profit.

BIG PLACES OF THE PRESIDENTS.—Although Washington, the capital of the nation, is naturally the place where first choice would be applied for the residence of the President, yet only one has been buried there:

John Adams ..... Quincy, Mass.  
Jefferson ..... Monticello, Va.  
Madison ..... Montpelier, Vt.  
J. Q. Adams ..... Quincy, Mass.  
Jackson ..... Hermitage, Tenn.  
Van Buren ..... Kinderhook, N.Y.  
Monroe ..... New York City  
Tyler ..... Richmond, Va.  
Polk ..... Nashville, Tenn.  
Taylor ..... Washington, D.C.  
Pierce ..... Buffalo, N.Y.  
Buchanan ..... Lancaster, Pa.  
Johnson ..... Cincinnati, Ohio  
Johnson ..... Greenville, Tenn.  
Garfield ..... Cleveland, Ohio  
Grant ..... Riverside Park, N.Y.

If a man would, according to law give to another an orange instead of saying, "give you that orange"—which one would think would be what is called in legal phraseology "an absolute conveyance of all right and title thereto"—then he would be a fool, and you and I and every one of my estate and interest, right, title, claim and advantage of and in that orange, with all its rind, skin, juice, pulp and seeds, belongs to him, and otherwise eat the same, or give the same away, as fully and effectually, as if he had given it to me. Well, now, I'll have to think. What was his salary? Well, now, I'll have to think. It was either \$800 or \$1,000. I think it was \$800; but you'll have to ask my partner to find out certainly. —Boston Transcript.

The Society American declares the idea that the United States would be the American home of blimps once a century—"all alone." The period at which the pantomime flowers is owing to the climate and soil of America, and will be rigidly maintained. Remember that unlike most of the world, our blimps are composed of pure bone and contain no South Carolina Rock whatever.

We solicit a continuance of the favors so generously bestowed upon us in the leading farmers of this country.

Aug. 1, 1885.

**A. FRIEDMAN'S,** UNDER THE "KENT NEWS" OFFICE CLOTHING, which we will sell at a LOW PRICE. [August 22, 1885.]

We also have on hand a Large Stock of CAPE ANN STANDARD OILED CLOTHING, which we will sell at a LOW PRICE.
