Champion Force-feed Binder.

The great force-fee : principle is the most pronounced improvement and ccess in harvesting machines that has been made in 20 years. It has been still further improved by the addition of an extra roller at the top of the lewer elevator On the old style of elevator that is still used on all other machines, a great deal of grain is wasted between the binder table and the upper end of the love: elevator canvas With our new principle of the force feed elevator we guarantee that this difficulty is entirely overcome. The third roller in the upper elevator permits the lower ply of the canvas to deflect upwards, changing the direction of the grain, and, aided by the extra roller at the top of the lower elevator, forces the grain positively to the binder.
