Champion Force-Feed Binder. The great force-feed principle is the most pronounced improvement and success in Harvesting Machines that has been made in twenty years. It has been still further improved by the addition of an extra roller at the top of the lower elevator. On the old style elevator-still used on all other machines -a great deal of grain is wasted between the binder table and the upper end of the lower elevator canvas. With our new principle of the force-feed elevator we guarantee that this difficulty is entirely overcome. The third roller in the upper elevaor permits the lower ply of the canvas to deflect upwards,
