what about:

The State of the World. CANTA MONICA, CALIF.— O Up in Montreal a veteran showman says he talks with chimpanzees in their own language. I wish he'd ask one of his chimpanzee pals what he thinks about the present setup of civilization.

Because I can't find any humans who agree as to where we all are

going and what the chances are of getting there. In fact, the only two who appear to be certain about it are young Mr. Corcoran and Cohen, and they seem to hesitate at times not much, but just a teeny-weeny bitwhich is disconcert-

We are likely to lose

ing to the lay mind. Irvin S. Cobb

confidence even in a comet, once it starts wobbling on us. I'm also upset by a statement from England's greatest star-gazer -they call him the astronomer royal, which, by coupling it with the royal family, naturally gives astronomy a great social boost in England and admits it to the best circles. He says the moon is clear off its

mathematically prescribed course.

that. They were figures anyhow. Lately the papers have been strangely silent on the subject. Perhaps you remember the old story told on the late John Sharp Williams, who frequented a game at Washington where sportive statesmen played poker for heavy stakes -mostly with those quaint little fictional products called I. O. U.'s as mediums of exchange.

Early one morning a fellow senator met the famous Mississippian coming from an all-night session. "I certainly mopped up," he proclaimed. "I won \$3,000-and what's more, \$8.75 of it was in cash."

Autumn Millinery.

TUST as the poor, bewildered males are becoming reconciled to the prevalent styles in women's hats, up bobs a style creator in New York warning us that what we've thus far endured is merely a foretaste of what's coming. In other words, we ain't seen nothin'!

For autumn, he predicts quaint number with a slanted peak fifteen inches high, which, I take it, will make the wearer look like a refugee trying to escape from under a collapsing pagoda.

Another is a turban entirely composed of rooster feathers. A matching coat of rooster feathers goes with this design. But in

the old days they used hot tar. A third model features for its tophamper a series of kalsomine brushes sticking straight up. Naturally, the hat itself will imitate a barrel of whitewash.

But the gem of all is a dainty globular structure of Scotch plaid. Can you imagine anything more becoming to your lady wife than an effect suggesting that she's balancing a hot-water bag on her brow?

"McGuffeyisms." THE lieutenant-governor of Ohio

urges a return to "McGuffeyism" for settling modern problems. 'Twas in a McGuffey reader that I met those prize half-wits of literature—the Spartan boy who let the fox gnaw his vitals; the chuckleheaded youth who stood on the burning deck; the congenial idiot who climbed an alp in midwinter while wearing nothing but a night shirt and carrying a banner labeled "Excelsior" in order to freeze to death; the skipper who, when the ship was sinking, undertook to calm the passengers by-but wait, read the im-

"We are lost!" the captain shouted, As he staggered down the stair. And then the champion of all—the Dutch lad who discovered a leak in the dyke so he stuck his wrist in the crevice and all night stayed there. In the morning, when an early riser came along and asked what was the general idea, the heroic urchin said-but let me quote the exact language of the book:

"'I am hindering the sea from running in,' was the simple reply of the child." Simple? I'll tell the world! Nothing could be simpler except an authority on hydraulics who figures that, when the Atlantic ocean starts

GRASSES, LEGUMES USED AS ENSILAGE

Can Be Kept in Condition by Adding Molasses.

By A. C. Kimrey, Extension Dairy Specialist, North Carolina State College.

WNU Service. With molasses as a preservative, any green crop that will make hay can be stored in a silo without any appreciable loss of feed value.

Corn silage contains substances that act as a preservative, but legumes and grasses do not have enough sugar to ferment properly. By adding molasses to legumes and grasses, the material can be kept in good condition.

The crop can be cut at any stage of maturity and in any kind of weather. However, greater feeding value is obtained if the crop is cut as early in the season as possible without injuring the stand. Cereal crops should be cut when the grain is in the milk stage.

Start cutting early in the morning. If the crop is wet with dew or rain, so much the better. The crop should be put in the silo within a few hours after cutting.

If the crop must remain in the field more than a few hours on a dry day, water should be added as it is blown into the silo.

Around 40 to 45 pounds of molasses should be added to each ton of cereal and grass crops, while 75 to 80 pounds should be added to a ton

of legume silage. The molasses can be added from an elevated barrel by allowing the proper amount to flow through a spigot onto the green material as it is fed into the cutter.

Egg Producers, Handlers

Can Stop Summer Losses Producers and handlers of eggs are losing hundreds of dollars every week of warm weather from highly perishable fertile eggs, according to O. C. Ufford, extension poultryman for Colorado State college, Fort Col-

Suggestions for preventing this loss are outlined as follows: Roosters should be marketed or confined during the summer so that infertile eggs may be produced. Provide one nest for each four
