Drive Against Trachoma

Prior to the war the existence of vengeance did not diminish in the trachoma in Rumania was almost general, but in the process of training young men for the military service there was a successful onslaught upon the ravages of the eye disease. Recruits found to be infected were sent to a hospital, where they remained as long as their condition was regarded as infectious. A history of each case was prepared and a government physician was sent into the locality of the victim's residence and examinations made. If any great number of cases were discovered, means were taken at once to stamp out the disease. This resulted in a great diminution of the cases. During the times, the invasion of troops, the immigration of Russians. the annexation of Bessarabia, the return of war prisoners and the return of imperfectly healed soldiers from the field added much to the spread of tra-Doctor Cerkez, who has been designated by the government to investigate the conditions, urges the legislative carrying out of early diagnosis, regular eye examination of school chi dren and workmen, the erection of special trachoma hospitals and dispensaries. migratory dispensaries for the village folk, compulsory notification and treatment, eye examination of all immigrants and, finally, the organization of propaganda work.

DR. JAMES W. BARTON

Lunch for Office Workers YOUNG man whom I had A examined regularly during his student days at the university met me in a restaurant one day and I noticed that he was extremely overweight. He said he couldn't explain his overweight. I told him that he had likely stopped all exercise and simply ate all he desired. "Well," he replied, "I eat no lunch whatever."

I asked him what he was doing in the restaurant at the noon hour, and he hunched his shoulders and said that he just ate a couple of chocolate eclairs and drank a couple of glasses of milk each day at lunch time; really no lunch. Just think what two chocolate eclairs and two glasses of milk amount to in heat units or calories as they are called.

The milk would be about 150 calories, per glass, or 300 in all. A chocolate eclair should have a couple of tablespoonfuls of whipped cream and each tablespoonful equals 100 calories. Thus with the chocolate on the outside, the dough or cake part, and the

whipped cream inside there would be about 500 calories in the two eclairs. That is 800 calories which was not even a lunch for this overweight man. The total number of calories needed by this man was about 2,400 a day. Now what should the average office worker-man or woman-eat for lunch

of the food available at the various restaurants or cafeterias? It is taken for granted that these office workers have to use their brains during the afternoon, and too much food would make them sleepy for an hour or more after lunch; a "big" meal should therefore not be eaten. Weakness at 4 P. M.

However, as office workers they have likely taken a light breakfast and are hungry by the time the usual lunch Another big fashion feature is the hour-12:30 to 1:30-arrives. If they one shown in the picture. This blouse o'clock in the afternoon they feel weak. is of bright green pleated silk chiffon. With essary to maintain strength, prevent black bolero two-piece dresses or suits the "all gone" feeling about 4 p. m., and have the proper appetite for, and the outstanding color idea is to wear as bright a blouse as the new silk active digestion of, the evening meal. prints can afford or if not a print then It would be wise therefore if a sandlet your blouse be of a high-color pleatwich containing meat or egg were eaten at noon, as this protein form of food ed silk sheer. Anyway, go the limit in matter of daring color for your blouse. is readily digested, burns itself and other foods up rapidly to give heat and energy, and is nature's greatest builder or repairer of worn tissues.

If, in addition to the meat or egg sandwich, raw fruit were eaten one day and raw vegetable together with milk, water, tea or coffee, the next day, it should be the ideal lunch for the average office worker who is neither too fat nor too thin.

Diet for Underweight What about lunch for the underweight office worker? In addition to the meat or egg sandwich, the underweight office worker should have a vegetable salad dally with mayonnnaise dressing, a slice of

bread and butter, and a glass of milk, cocoa, tea or coffee. In fact these underweights might do well to take glass of milk or a banana or piece of candy at 4 p. m. also. As the overweight office worker always has a good appetite, a "filling" lunch, poor in calories or heat units. should be taken. In addition to the meat or egg sandwich (the meat or egg might be taken in another form of course) there should be some "clear" soup and a large helping of green vegetables such as lettuce, cabbage, asparagus, radishes, celery, using vinegar instead of an oil or rich dressing. A little fruit might finish the repast. The

large helping of green vegetables gives a "satisfied" feeling and is of course very low in heat units. For the average office worker the cafeteria or restaurant lunch should be built around a meat or egg sandwich with fruit one day and vegetables the next; for the thin and fat ones the above additions or suggestions might well be followed.

Removing Thyroid Gland When the thyroid gland in the neck manufactures so much juice that It makes the heart beat too rapidly all the time, surgeons now remove this gland entirely so as to slow down the heart rate and save the patient's life. While not considered as dangerous an operation as it was a few years ago, it nevertheless has the dangers which attend any operation, injury to important nerves in the throat, infection, bleeding, and suffocation,

Dr. G. H. Pratt, New York, reports 19 cases of heart disease in which this operation was performed to save the patient from death. C-WNU Service.
