greatly thickened. Distal joint is totally ankylosed and thumb cannot be closed in to palm. There has extensive laceration of index finger, the scars being principally upon palmar aspect. Finger is atrophied. Both distal and proximal joints are totally ankylosed., the distal in straight line and the proximal at an angle of thirty degrees, the extremity of finger being deflected toward the middle finger.. Use of thumb and finger greatly impaired. The meta-carpo-phalangeal joints being uninjured he can grasp small objects between the extremities of finger and thumb. We judge the disability to be equivalent to one half of total of thumb and index finger and recommend rating of six-eighteenths. The other fingers are perfectly normal. No other disability exists,

SURGEON'S CERTIFICATE
