The Kind You Have Always Bought Bears the Signature of

In Use For Over 30 Years. THE CENTAUR COMPANY, NEW YORK CITY.

buggy, be sure it's a Studebaker'

Sound advice from the man who has been driving one for twenty years.

When you buy a Studebaker buggy you are buying all the skill, experience and science in buggy building that half a century can produce. You are protecting yourself against the mistakes of younger luilders.

You will always be proud of the Studebaker nameplate, for there isn't a buggy on the road that is its equal for style, luxury and good looks.

Flexible bent-reach gear, graceful lines, solid corner, plugless body, double-ironed shafts, are a few of the special Studebaker features.

The new close-fitting shifting rail is enough in itself to make you buy a Ludebaker buggy.

Hicks' Forecasts For May.

With a regular storm period central on the 4th, and extending from the 2hd to the 7th, expect all the results due under such astronomic conditions. The Moon is on the celestial equator on the 2nd, and in conjunction with Earth and |Sun on the 6th. It will grow suddenly will set in, passing from west to east over the country. The 4th, 5th and 6th will be the dates of greatest storm culminations, although the 2nd calls for active lightning and thunder. Change to clearing and cooler weather will follow in the immediate wake of the

A reactionary storm period is central on the 9th, 10th and 11th. The Mercury equinoctial period begins in this reactionary period, and its added influence will be noticeable in thick, prolonged cloudiness, with tendency to drizzle and rain. Very cool nights with probable frosts northward, will come with the high barometric area behind these

A regular storm period, and the Mercury period both have their centers on the 16th. While the effects of the Mercury disturbance will be apparent from about the 9th to the 20th, it will be felt n greatest power during the storm periods within the mercury brace. This will be especially true on and about the 15th, 16th, 17th and 18th. The Moon! being in perigee and on the celestial equator on the 15th, electrical and wind storms of great energy are apt to appear

on and touching that date. A reactionary storm period involves the 21st to 23rd On and touching these days all the meteorlogical elements will undergo a periodic change temperature will rise, barometer will fall, clouidness will ensue, and renewed storms of more or less rain, wind and thunder make their transit eastwardly across the country. The center of another seismic per-10d falls on the 20. Very cool nights for so late in the season will result from the high barometer, and other anti-storms conditions, about the 23d to 26th. A regular storm period covers the last week in May, being central on the 27th. The moon is at last quarter on the 27th,

FAIRLEE, MD.

See the Picture of the Car the price astonishes me pirce aeignis iou;

As handsome a car as the most exacting buyer could desire. From cooler to tail-light impressive, every line indicating fleetness and power, eloquent of comfort and pleasure, built with faithful regard to genuine quality, correct, invulnerable in every mechanical detail, the best in its class that American skill can produce and money can buy.

That is the Overland. They don't build only 5,000 of them; nor even 10,000. If they produced no more than that number of cars, they too, would have to ask at least \$1300 for the beautiful car we offer at \$985 F. O B. Toledo.

They build 40,000 cars this season. They contract for the raw material for this enormous production at one time, pay for it in cash, and thereby secure the best the markets afford, at the lowest prices.

The price includes everything needed for comfortable touring; acetylene engine starter, gas tank, gas and oil lamps, genuine mohair top and top covering, clear vision, rain-vision windshield, Warner speedometer, horn, roberail, foot-rest, tire carriers in the rear of the car, etc.

The Overland motor is the best of its type. Some

motors—this is an important point—have three main bearings, some only two. Overland motors have five large main bearings; that's one of the reasons why they work without trouble. The whole motor is built for power and endurance. The Overland model 69 rear axle is of a new and

improved type, three-quarter floating; this axle system has all the advantages of the full-floating axle, but none of the shortcomings of the semi-floating axle usually found in cars of moderate price. The brakes are of new design, overlarge, gradual

but powerful in application. They will hold the car In Overland cars the transmission is combined with

the rear axle and the drive is in a straight line. Both these features make for saving of engine power and smooth and quiet running.

Come and take a look at it. Compare it with others. Take a ride in the big, fully equipped Overland; it involves no obligation on your part. Then draw your own conclusions. That's all.
