

### Now is the Time to Buy Your 66 Six - 46?

Let us again urge you to place your order for a Fairfield "Six-46" as soon as you possibly can.

Don't wait too long-don't be too sure that you can buy to just as good advantage thirty or sixty days from

For—remember—there were three purchasers for each "Six-46" that we could turn out last year. And, up to the present time, there is every indication that this "sold out" condition will be repeated.

Then, also remember that the cost of manufacturing materials and labor is still soaring.

Already, several manufacturers have found it necessary to increase the list price of their cars, and more announcements of this kind are undoubtedly coming.

By early buying, we have done everything that we possibly could to protect ourselves and you. But in the face of a constantly rising market, we may be forced to increase prices proportionately.

From the present outlook there is no other alternative for we flatly refuse to compromise on the quality of our cars. We shall continue to use only the best materials—no matter how

far the commodity prices may advance.

Of one thing you can be certain—the Paige "Six-46" will never cost less than \$1295 this year. We absolutely guarantee this, but we can't undertake to guarantee against an advance.

Above all, please understand that this advertisement is written in a sincerely helpful spirit. It is by no means our purpose to "stampede" motor car buyers into early or ill-advised purchases.

We are merely telling you the factsfacts that can be readily substantiated by your banker or any man who is well informed in regard to industrial conditions.

We want you to drive a Paige, of course, but we have never found it necessary to resort to "expedients" in order to sell a single car of our production.

The "Six-46" now costs \$1295. At that price, we honestly believe that it represents more actual dollar-for-dollar value than any other motor car on the market.

Wait too long—and you run the risk of paying more.

Place your order now, and you can rest assured that you will never regret the decision.

## BREEDERS ASSOCIATIONS

How To Organize And Some Of The Benefits Resulting.

F. B. BOMBERGER, Maryland Agricultural College Extension Service.

The purpose of Community Organization for breeders of dairy cattle is to secure the co-operation of the various breeders of a community in the production and improvement of high grade pure-bred dairy cattle and in establishing a reputation for the community as a breeding center. The advantages of this plan are: concentrated attention along definite lines; co-operation of the breeders in establishing high standards for the community and encouragement for the owners of several herds to produce a distinct type and to supply a large number of such animals to meet the demand created by co-operative advertising. Through the meetings of the organization its members are kept informed of the progress in all that pertains to their work. Through cooperation they may secure protection against fraud and contagious diseases and may secure many advantages not available to the individual breeder. Breeders' associations can secure official test for advanced registry at less cost than where such associations do not exist.

Some Business Advantages. Advantages in buying and selling are secured through co-operative advertising; through the purchase of best breeding males for use in several! herds and through co-operation in purchasing and importing a number of choice animals. By exchanging animals the members may improve their herds with good blood without importing animals from a distance. The members may combine in selling to fill large orders for a distinct dairy type and thereby attract buyers from important dairy states. For instance, carloads of selected animals have been | shipped from Wisconsin to many middle states, the Pacific Coast and even to Japan and Mexico as a result of such organization in that state.

The method of organization is for a leader in the community to call a meeting and get as many interested breeders as can be secured, this meeting to be addressed by a capable speaker on the value of such organization. A constitution and by-laws may be adopted and officers selected either at the initial meeting or at another meeting, as desired. Details of the organization may be varied according to local conditions. The cooperation of the College of Agriculture may be secured and wherever possible speakers will be furnished to address meetings held to organize such associations.

OBJECTIONS TO GROWING GRAIN CROPS IN THE YOUNG ORCHARD.

H. BECKENSTRATER, Maryland Agricultural College. Most of the grains make very ob. jectionable companion crops in the orchard; in fact, many an orchard has been ruined by their use. While such crops, wheat, oats and the like, occupy the land, it can not be cultivated. They grow at a time when the trees need cultivation most and these crops at the same time consume large quantities of plant food and moisture, and have a strong tendency to make the land poor. There is no good reason why the above grains should ever be grown as a companion crop in the

Because of its great economic value and the many uses to which it can be put the orchardist is frequently tempted to plant corn in the orchard. Corn has not all the objectionable fea tures that the other grains have. It requires cultivation, is planted later in the season and by the time it gets under way, the trees have completed a good share of their growth. If corn is used it should be kept a good distance away from the trees, the rows should be run north and south and it should be

young orchard. It competes with the moisture and plant food when the trees need them most. It provides excellent means for harboring insects and other pests. If hay must be grown, on the land occupied by the orchard, as some persist in doing, by all means cut down the trees and get

IN MARYLAND.

Owing to the high price of hairy vetch, many farmers are wondering if they can substitute spring vetch, thinking that this can be sown in the spring, as its name would imply. Spring vetch is not suited to this

State. It is an absolute failure. None of the vetches grow well after our hot, muggy weather sets in in late spring and early summer. Spring vetch will not make enough growth to amount to much before the hot, muggy weather sets in, hence there is seldom enough growth made to pay for

Spring vetch is also sometimes called common vetch and sown in the fall, but it is not as successful as hairy vetch when sown in the fall, and, in fact, is practically as much of a failure when sown at that time as when sown in the spring. - Nickolas Schmitz, Maryland Agricultural College Extension Service.
