DRIVE CLOSE TO CURB Driving as close as is reasonable if glycerine is used as an anti-freeze to the curb is a meritorious precau- may be tempted to use shellac on tion during the season when the them. This is not advisable. Glycerstreet surface so often is exceeding- ine will dissolve the shellac and may whole line is called upon to stop, such a warning will forestall those sudden brake applications that induce dangerous skids.

USE LIGHT LUBRICANT Car owners usually recognize the need for a lighter lubricant in transmission, differential, and engine when the mercury drops. Why not extend this consideration to other units? The steering and spring shackles are particular places where lighter lubrication is distinctly in order. A heavy grease hardens when cold, and because of this, certain parts of the steering and shackles are operating dry. Since they are moving parts, the effect is wear. A heavy oil should supplant the grease used the open car. A precaution is nec- game at forward and Dopson at the referee to pass the ball to the in advance of the playing date. in warm weather and even this well might be thinned with ordinary medium oil from time to time.

KEEP WHEELS ALIGNED a prolific cause of knocking the front allow it to dry thoroughly. wheels out of alignment. This is expecially true in Winter where the HOT WATER BEST REMEDY street surface next to the curb is aften slippery from ice or snow.
