[Extract from the report of the Centennial "This paint is quite different from paints in general use. \* \* Work which has been done with it, some of it exposed for years to the moist atmosphere of the sea-shore, establishes its great durability. \* \* \* It is mixed ready for use, easily applied, of great beauty, and is economical."

[Extract from the report of the French (Centennial) Commission. "It possesses merits unattainable by the old method of combining paint. \* \* \* It can be applied with great facility and perfect regularity; dries with a rich, glossy surface, and will not chalk or crack off. \* \* \* It never separates, is always ready for use, and will not spoil when exposed to the air. \* \* \* It can be applied by any one, whether a practical painter or not."

The Averill Chemical Paint has now been before the public over twelve years, and in spite of great opposition has pushed itself rapidly into every State in the Union by its own merits, gaining ground steadily, winning cach succeeding day new friends, until we now rank among the foremost of the business enterprises of the age.

In the Averill Chemical Paint will be found the following good qualities: 1. Durability. Far in excess of that possessed by any other paint. 2. Its readiness for application, from the package in which it is furnished, causes a saving of time, labor and material, which together with there being no waste, makes the most convenient paint ever made. 3. Its universal adaptability. In all uses for paint this is the best. It works equally well over wood, brick, stone, iron and plaster; adhering firmly; giving a rich and uniform 4. Its resistance of water. It furnishes a

firmer and better protection against water than any other paint in use. Under a storm, even though it has been applied but a few minutes, this paint does not wash or run. 5. Fire-proof. Its combination chemically produces a material unequalled for protection lagainst flames or heat, and equal to a sheath-6. Irnn Work. For plain or architectural iron work, it will prove far more durable and beautiful than other. It will prevent corosion, and forms a coat that no ordinary pressure of the atmosphere or elements can force 7. For Roofs, tin or wood, it is unsurpassed, being a perfectly water-proof coating, and does not impregnate the water, nor will it crack and blister, as is the case with innumer-\$.
