

After an hour into the small back room
Loun on enquiry for the key of the small
private room. Dr W. said that was his
private room, where he made his chemical
preparations - & then some things in them
which were dangerous. That the key he
had not got - for Clapp had taken it from him,
the room was finally broken open with
an axe. Some of the party went in. I
went in & other persons also went in. There
was a coal near the door. Dr W. saw it
& said that was a coal he saw when he
lasted. He also remarked while they were
moving about the room, that if they were
not careful they would break some of the
bottles and do great mischief - On the
opposite side of the small room, there
were drawers which they tried to get open
& could not. They then broke them open
or some of them with axes. Dr W.
objected to them doing it - saying there
was nothing there but demijohns &
bottles, but they were broken open & there
were demijohns & bottles there. -
Somewhere in this place a hatchet
