

I worked on for Dr. P. - on further upon
 visiting I noticed the hole through the teeth in some
 location when an under such case. I noticed the
 them were an appearance due their teeth had
 been ground, & I said that Dr. P. was grinding
 to keep for him - & in some way due I saw
 this. I have as good reason to believe that there
 are the teeth we made; I was a doubt if
 I have not the highest doubt that this block was
 the one I worked on for Dr. P.

I will that I worked for them almost all
 night - We were obliged to be present as to
 the time because Dr. P. was sure to be there.

I went to the meeting at the opening of
 the College. I shall think to aid we speak.
 When complimented by Gov. Everett he seemed a bit
 to I think.

I mean the mould and the had pulled
 out. Can't tell how much time we spent on
 them - quite a number of days.

I have tried exp^t with block of teeth
 by pulling them into a hot fire, & they will suddenly
 break. - These worn - or in which water has
 been absorbed or more liable to explode, or crack.

At some time after the teeth were
 finished, perhaps a year ago, the lower side
 of teeth had got bent together; it became
 necessary to take the teeth from the plate, to remove
 it - by heating & the lower mould.
