

L - I should be asked about the  
draft of the furnace that warmed  
my lecture room - he suggested  
having a lower panel taken  
out of the door leading into the  
dissecting room entry to admit  
more air - it was done - & a  
man can get in there - or can  
reach & unlock the door inside -  
the other door opening into the  
laboratory had the jacked trap  
key in the lock but was not  
locked - Burns' man jacked  
the key & fixed it - he also will  
recollect marks on the door  
it having been forced which were  
made more than a year ago - as  
the door had sprung & could not  
be opened .
